You are a **Microsoft Most Valued Professional** or a **Microsoft Certified Trainer**?

» Here's what we can offer you!

UltraSearch **finds** files and folders on **local NTFS drives** and provides the results in just a few seconds.

Screenshots

UltraSearch does not maintain an index which is stored on your harddisk, but achieves its speed by working directly on the **Master File Table (MFT)** of the **NTFS partitions**. UltraSearch even identifies **NTFS hardlinks**.

Simply enter a file name or a pattern like *.exe and see the first results while you are still typing. In addition, UltraSearch supports **regular expressions** and will **search file content**.

Additional information like file size and file dates (last changes, last access and file creation) will be shown for all listed files. Naturally, the Explorer context menu is available inside UltraSearch.

UltraSearch enables you to **exclude folders, files or file types** from searches via an exclude filter. The search results can be **sorted** according to different criteria, **printed** or **exported** as text, RTF, HTML, CSV, and Excel file.

Define **file groups** (such as movie files, text files etc.) and search for all file types the group contains.

The **100 recently used search patterns** can be saved and selected from a dropdown list. UltraSearch can suggest patterns or autocomplete manually entered patterns automatically.

UltraSearch can be started from the context menu of your Windows Explorer - starting a search within the selected directory could not be easier.

Use UltraSearch wherever you like thanks to the portable ZIP version.

Running a 64 bit operating system? UltraSearch is available in a **32 bit** and a **64 bit version**! **Download** your version today!

Our software **TreeSize Professional** offers a **custom file search** where you can search for and filter by additional criteria such as file size or file date.
